Evofusion

Quiet automation.

For businesses that want to move faster.

Brand concept spec
v1.2 · April 2026

evofusionai.com

01

The brand at a glance

Evofusion is an AI automation studio. The name is the brief: evolution + fusion — we fuse modern AI capabilities into the way a business already works, and what comes out the other side is a faster, calmer, more capable version of that same business. We don't replace teams. We give them software that handles the parts they shouldn't have been doing anyway.

We build four things, often together: AI voice agents, chatbots, automation workflows, and the websites those things live on. Most clients buy two or three together because that's where the leverage is — a website that captures leads, a chatbot that qualifies them, an automation that routes them, and a voice agent that handles the calls when humans are off the clock.

Category	AI automation studio
Tagline	Quiet automation.
Long tagline	Quiet automation for businesses that want to move faster.
What we build	Voice agents · Chatbots · Workflows · Websites
Audience	SMBs ($1M–$50M revenue) who feel behind on AI but don't want to hire a 50-person agency
Hero offer	A 6–10 week sprint that combines a redesigned website with three to five custom AI workflows, agents, or bots — delivered as a single engagement
Secondary offers	Standalone builds (just the chatbot, just the site, etc.) and ongoing automation retainers

02

Positioning

The problem we solve

SMBs hear "AI is going to change everything" five times a day and have no idea what to do with that. The big consultancies are too expensive. Fiverr automations are too flimsy. Their internal team is already underwater. Meanwhile their website — the front door of the entire business — looks tired, loads slowly, doesn't convert, and the phone keeps ringing with questions a chatbot could answer in seconds.

Evofusion is the studio you call when you want all of that handled by one team that won't talk down to you.

What we actually sell

1. AI voice agents

Production-grade voice AI that handles inbound and outbound calls — booking appointments, qualifying leads, answering FAQs, taking orders, doing intake forms. Built on Vapi or Retell, integrated with your CRM and calendar so a call doesn't end at "thanks, we'll follow up" — it ends with the lead in the right place and the right person notified. For service businesses (clinics, dealerships, home services, agencies) this is often the highest-ROI thing we ship.

2. Chatbots

On-site and on-platform chatbots that actually know your business — trained on your docs, your knowledge base, your product catalog. Used for support deflection, lead qualification, internal knowledge lookup. Not the floating bubble that says "How can I help?" and then can't help. We build them with grounding and handoff to human, and we measure whether they actually deflect tickets.

3. Automation workflows

Custom-built automations that connect the tools a business already uses (CRM, email, calendar, support, ops) and remove the busywork. Lead routing. Invoice processing. Customer support triage. Internal reports that write themselves. Built on n8n, Zapier, and custom code where needed, with LLMs woven in where they make sense.

4. Websites that perform

Marketing sites and lightweight web apps designed to convert. Built on modern stacks (Next.js, Webflow, or Framer depending on fit). Not just pretty — wired into the same automations, agents, and bots we build, so a form submission isn't just an email. It's a

qualified lead in the CRM, a chat that's already been had, a callback the voice agent has already scheduled.

The hero engagement

A 6–10 week sprint where we deliver a combination of the above. New website, plus three to five core AI workflows, agents, or bots. Training for the team. Documentation. A retainer option for what comes next. This is the package most clients should buy, and our pricing reflects that.

Who we're for

- Founders and ops leads at SMBs who feel the pressure to "do something with AI" but don't know where to start
- Service businesses (clinics, dealerships, home services, real estate, agencies) where the phone is the front door and the team is overworked
- Agencies and professional service firms (legal, accounting, healthcare admin) drowning in repeatable work
- E-commerce and DTC brands whose website is doing 70% of what it could and whose support inbox never sleeps
- Companies that have outgrown Squarespace + a virtual assistant but aren't ready for Salesforce + a Big 4 consultant

Who we're not for

- Enterprise (we're a studio, not a consultancy — we'll point you elsewhere)
- Pre-revenue startups (you don't have enough process to automate yet)
- Anyone who wants the cheapest option (we're not trying to win on price)

Competitive frame

We sit between three categories that don't quite serve our customer:

- Vs. AI freelancers (Fiverr, Upwork): we deliver production-grade systems with documentation and a real handoff, not a brittle Zap or a chatbot that hallucinates pricing.
- Vs. traditional web agencies: we don't ship a beautiful site that's disconnected from the business — voice, chat, and automation are in the DNA, not bolted on.
- Vs. enterprise AI consultancies (Accenture, BCG X): we ship in weeks, not quarters, and don't bill $400/hr for slide decks.

03

Mission, vision, values

Mission

To make the boring parts of running a business disappear, so the people running it can do work that actually matters.

Vision

A world where every small business has the same operational leverage as a tech company — without having to become one.

Values

Quiet by default

Good software fades into the background. We don't build automations that need a dashboard with seventeen tabs, or chatbots that try to befriend you, or voice agents that pretend to be human. If you notice it, we did it wrong.

Plain English

We don't say "agentic hyperautomation orchestration platform." We say "this thing reads your emails and files them." If we can't explain it to your bookkeeper, we built it wrong.

One team, real handoff

We don't disappear after launch. Every project comes with documentation, a Loom walkthrough, and a 30-day support window. Optional retainer for what's next.

Craft over speed-to-pitch

We'd rather show up on week three with a working voice agent prototype than week one with a deck. The work is the proof.

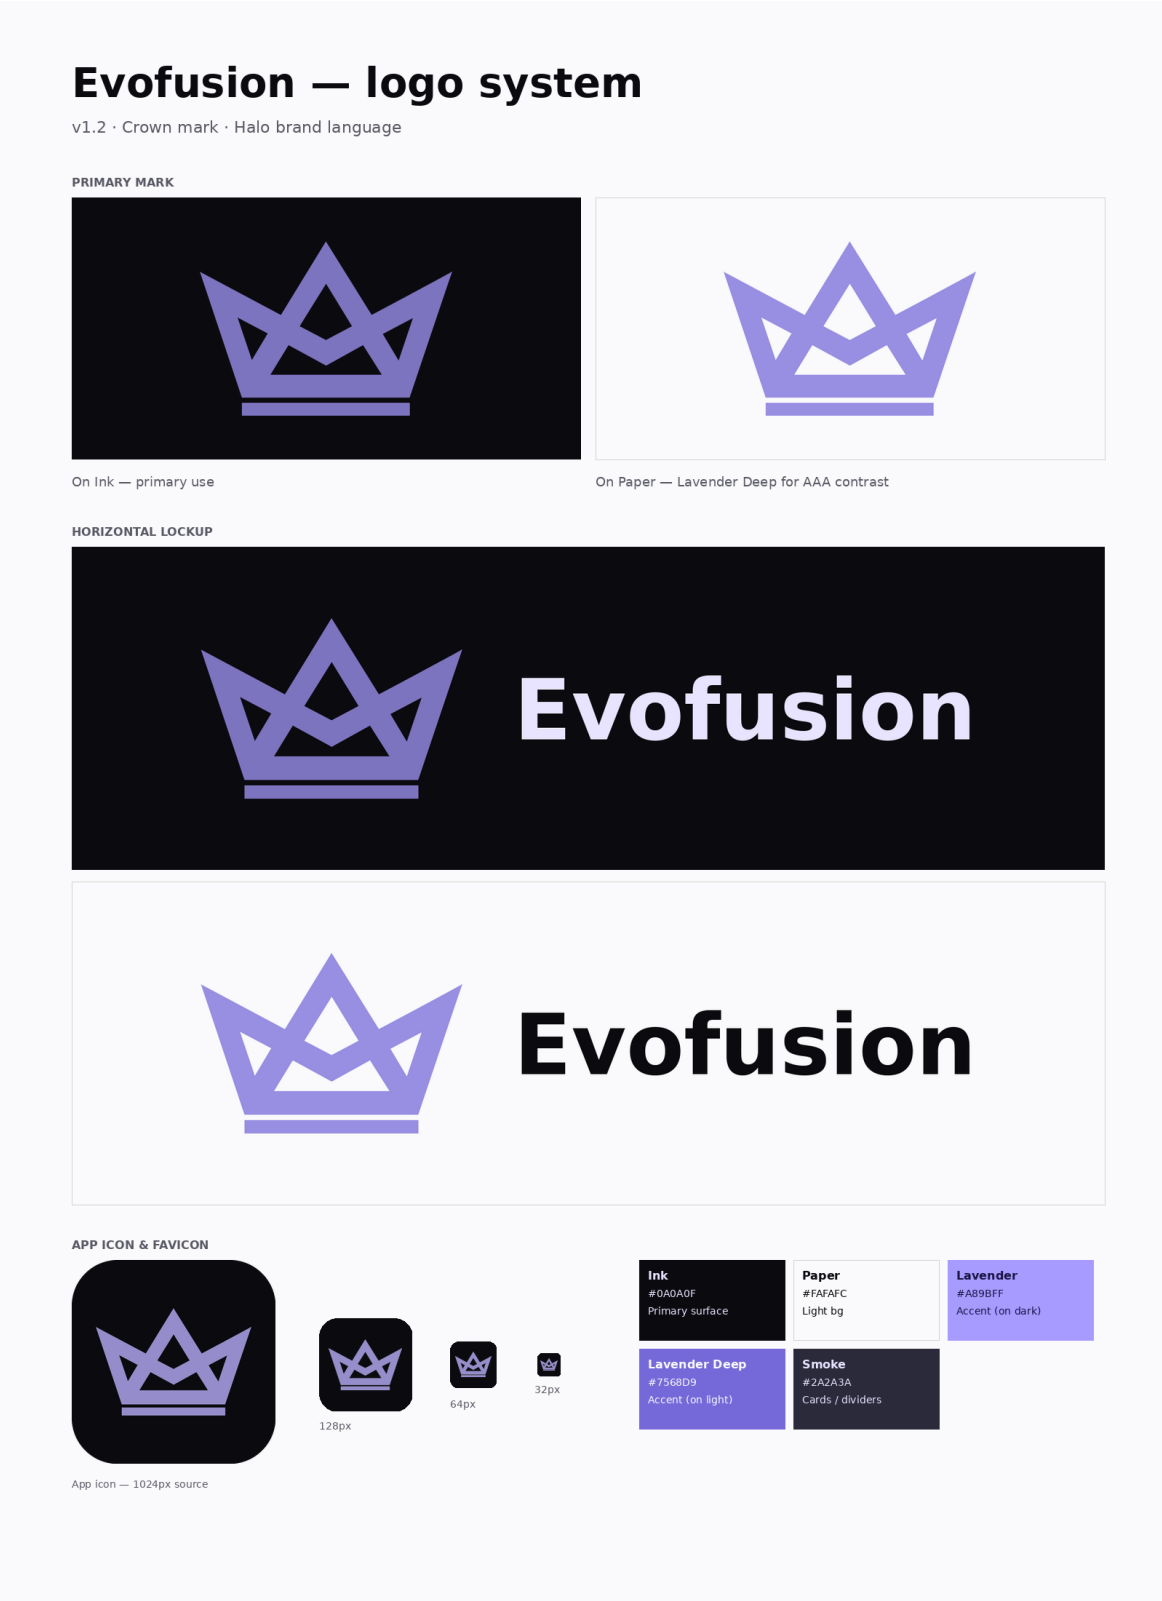
04

Visual identity

The logo

Evofusion's mark is a geometric crown in lavender — five faceted peaks rising from a single base, with a clean horizontal bar beneath. The crown signals leadership and capability without arrogance: not a royal crest, but a modern symbol of the operational edge our clients gain. Rendered in lavender rather than gold, with sharp angular geometry rather than ornamental curves, it reads as confident and contemporary — a quiet kind of authority.

The mark always sits in lavender (or lavender deep on light backgrounds), never gold or black, never with ornament added. The wordmark uses Inter Bold (or Söhne when licensed), capitalized as "Evofusion" — one word, one capital.



The full logo system at a glance — primary mark, lockups, app icon, favicon, and core palette.

Logo system

- Primary mark: the lavender crown, used everywhere — app icon, favicon, social avatars, in-product, marketing
- Wordmark: "Evofusion" set in Inter Bold (or Söhne when licensed), capitalized, tight tracking (-2%)
- Horizontal lockup: mark + wordmark, mark left, with one cap-height of "E" between them
- Stacked lockup: mark above wordmark, centered, for square contexts and the deck cover

Color rules for the mark

- On Ink (#0A0A0F): use Lavender #A89BFF — the standard, brightest version
- On Paper (#FAFAFC): use Lavender Deep #7568D9 — a darker tone needed for AAA contrast on light backgrounds. Same color family, calibrated for the surface.
- Never on a colored background other than Ink, Paper, or Smoke
- Never with a drop shadow, glow, gradient, or outline

Clear space and minimum size

- Clear space: minimum of one peak-height on all sides
- Minimum size: 24px wide for the mark; 100px for the horizontal lockup
- At sizes under 24px, use the simplified favicon variant

Color palette

Primary palette

Ink — #0A0A0F	Primary surface for dark mode and key brand applications. Use for backgrounds in hero contexts, deck covers, and the app's default theme. Near-black, slightly cool — never pure #000.
Paper — #FAFAFC	Primary background in light mode. Slightly cool off-white. Use for marketing site, documents, light-mode app surfaces.
Lavender — #A89BFF	The signature accent on dark surfaces. The mark, key buttons, highlight states. If you're using lavender on more than 5% of a screen, you're using too much.

Lavender Deep — #7568D9	Same color family as Lavender, calibrated for light backgrounds. Used wherever Lavender would fail contrast on Paper. Same role, different surface.
Smoke — #2A2A3A	The mid-tone. Card surfaces in dark mode, dividers, secondary buttons. Bridges Ink and Lavender.

Extended palette (use sparingly, for UI states)

Mist — #E8E4FF	Lavender at 15%. For tinted backgrounds, hover states, info callouts, wordmark text on Ink.
Stone — #5A5A66	Body text on Paper. Secondary text in dark mode.
Success — #6FCF97	Reserved for confirmation states only. Never decorative.
Alert — #E5847A	Reserved for errors and warnings only.

Rule of thumb: every screen should be 80%+ Ink or Paper, 15% Smoke or Stone, and 5% Lavender. The lavender is what people will remember.

Typography

Display & UI — Söhne (or Inter free fallback)	All headlines, buttons, navigation, body. 400 (regular) for body, 500 (medium) for emphasis, 700 (bold) for the wordmark. Tight tracking on display sizes (-2% to -3%). Inter is the free, open-source fallback that ships with Google Fonts.
Mono — JetBrains Mono	For code, technical specs, and the occasional small label where we want a hint of "this is a system, not just marketing copy."
Never use	No serifs. No script. No more than three weights. No italics for emphasis — use weight or color instead.

Type scale (web)

- Display: 64px / 1.05 line-height / -3% tracking / weight 500
- H1: 40px / 1.1 / -2% / weight 500
- H2: 28px / 1.2 / -1% / weight 500
- H3: 20px / 1.3 / 0% / weight 500
- Body: 16px / 1.6 / 0% / weight 400
- Small: 13px / 1.5 / 0% / weight 400

Layout, imagery, motion

- 8-point grid. Every spacing value is a multiple of 8 (or 4 for fine adjustments).
- Generous whitespace. Default section padding on web is 96px top/bottom on desktop.
- Maximum content width: 1200px. Long-form text columns: 640px max.
- Border radius: 8px for inputs, 12px for cards, 16px for hero modules. Never sharp corners.
- Photography is rare and editorial when used — no stock-y "diverse team high-fiving."
- Iconography: Lucide icon set, 1.5px stroke, never filled.
- No 3D renders, no AI-slop hero images, no glowing orbs.
- Motion: ease-out cubic-bezier(0.16, 1, 0.3, 1); 200ms micro, 400ms transitions, 600ms+ for hero moments only.

05

Voice and tone

Voice principles

Confident but never loud

We don't shout. We don't use exclamation points. We don't "unlock potential" or "revolutionize industries." We say what something is, what it does, and what it costs.

Plainspoken, slightly dry

Imagine a senior engineer who's also genuinely funny but never tries too hard. Evofusion can be witty, but only when the joke earns its place — never as filler.

Specific over abstract

Bad: "We help businesses scale through AI-powered solutions." Good: "We built a voice agent that books 40 appointments a week for a dental practice that used to miss half its calls."

Honest about limits

AI hallucinates. Automations break. Voice agents mishear things. We say so. We don't promise magic, we promise good systems and a phone number that works.

Tone matrix

Tone shifts by context. Voice doesn't.

Marketing site	Confident, sparse, high signal. Big claims with proof immediately under them.
Sales conversations	Warm, curious, direct about pricing. We ask more than we tell.
Product UI	Calm, instructional, never cute. Empty states explain what to do, not what's missing.
Voice agent scripts	Even calmer. Short sentences. Clear questions. Never pretend to be human — say "I'm Evofusion's assistant" up front.
Documentation	Plain, complete, slightly technical. We assume the reader is smart and busy.
Error messages	Apologize once, explain what happened, give the next action. Never blame the user.
Social	Mostly silent. When we post, it's a real thing we built or learned. No engagement bait.

Do / don't

Do	Don't
"We built this because billing took us four hours every Friday."	"We're passionate about empowering businesses."
"This is going to take six weeks."	"Let's hop on a quick call to align on synergies."
"Evofusion is an automation studio."	"Evofusion is a next-generation AI-native operational excellence platform."
"It costs $18,000."	"Pricing available upon request."
"This won't work for you if you have less than 50 customers."	"Evofusion scales with businesses of every size!"

Words

Words we use: Quiet. Calm. Built. Shipped. Working. Real. Plain. Studio. Workflow. Handoff. Voice. Agent. Bot.

Words we don't: Synergy. Disrupt. Revolutionize. Solution. Leverage (as a verb). Unlock. Empower. Best-in-class. World-class. Cutting-edge. Game-changing. Robust. Seamless (overused). "Powered by AI" (everything is). "AI-first" (meaningless). "Conversational" (every chatbot says this).

06

How this shows up across deliverables

Every artifact you build from here should pass three tests: Does it feel quiet? Does it sound like a person, not a brochure? Would a thoughtful engineer roll their eyes at any sentence in it? If yes to that last one, rewrite.

Pitch deck

- Cover: Ink background, lavender crown mark, three-word headline. "Quiet automation." Period.
- Body slides: Paper background, max 12 words per slide, one image or diagram per slide max.
- Numbers slides: massive type (180pt+), one number per slide, small caption beneath.
- Structure: problem → who hurts → what we do → proof → offer → ask. 12–15 slides.

Logo & marks

- Mark: lavender crown, sharp geometry, never ornamented
- Wordmark: "Evofusion" — Söhne/Inter Bold, capitalized, tight tracking
- App icon: crown on Ink with iOS-rounded corners
- Favicon: simplified crown, optimized for 32px and 16px
- Files delivered: PNG primary at 1×/2×/3×, plus the originals in this PDF

Website

- Single-page or short multi-page architecture. No mega-menus.
- Hero: "Quiet automation." Subhead: one sentence on what we actually do. CTA: "Book a 20-min call."
- Sections: What we build (voice / chat / workflow / web) → How it works → Recent work (3 case studies) → Pricing transparency block → FAQ → Contact
- Ink-mode default with a Paper-mode toggle. Lavender CTA buttons.
- Built on Next.js or Framer. The contact form is itself a showcase — submission triggers a chatbot follow-up demo and a voice agent callback option.

Mobile app

- Client portal: project status, automations dashboard, voice/chat agent transcripts, message thread, invoices.
- Ink theme by default. Four primary tabs: Workflows, Agents, Project, Inbox.
- Push notifications are rare and meaningful — never "engagement" pings.
- Onboarding: 3 screens max, no tutorial overlays. The product should be obvious.

Email & sales materials

- Templates use Söhne / Inter. No HTML banners. Plain text or near-plain.

- Sign-off: first name only, role, evofusionai.com. No quotes, no animal facts.
- Proposals: 4 pages max. Problem, approach, timeline, price. No "about us" section.

07

What to build next

With the name, positioning, voice, and logo locked, here's the order I'd recommend tackling the rest:

- One-page brand guidelines PDF (condensed reference for partners and contractors)
- Pitch deck (12–15 slides — investor or sales deck, your call)
- Website (start with the homepage — hero, how-it-works, four service cards, pricing, FAQ)
- Mobile app (client portal mockups; we'll need to scope what "v1" really means before designing every screen)

Tell me which one to start with and I'll get going.
